# Anhang D Grundsätze betreffend Einbehalt, Rückforderung und Sanktionierung bei Verstößen gegen inhaltliche Auflagen

Auf Basis der Analyse der Vor- und Nachteile des Sanktionssystems im ÖPUL 2007 wurde für das ÖPUL 15-20 ein neues Sanktionsmodell für die inhaltlichen Verstöße entwickelt. Nicht Gegenstand des neuen Modells sind die INVEKOS-Sanktionen, die zeitliche Sanktion, die Kürzung auf Grund von Überschreitungen der Obergrenzen, Rückforderungen auf Grund Nichteinhaltung der Verpflichtungsdauer etc., die in den jeweiligen Rechtsgrundlagen geregelt werden. Bei Verstößen gegen INVEKOS-Bestimmungen bzw. Greening-Verpflichtungen (auch äquivalente Verpflichtungen) sind die dort relevanten Sanktionsmechanismen anzuwenden.

Folgende Grundsätze sind bei inhaltlichen Sanktionen zu berücksichtigen:

- Die Sanktionen werden nach einem festgelegten Schema automatisiert im Rahmen der Berechnung vergeben und beziehen sich ausschließlich auf die betroffene Maßnahme;
- Die Sanktionen beziehen sich immer auf das aktuelle (geprüfte) Jahr. Verstöße gegen z.B. die Schulungsverpflichtung werden im Jahr der Feststellung geahndet;
- Werden Verstöße bei einer Vor-Ort-Kontrolle festgestellt, so ziehen diese schwerere Konsequenzen nach sich als solche, die im Rahmen einer Verwaltungskontrolle festgestellt werden;

Für die Beurteilung von inhaltlichen Verstößen sind grundsätzlich folgende Sanktionsstufen vorgesehen:

a. Verwarnung(ab 2020 Kürzung der Maßahmenprämie um 1%); (2)
b. Kürzung der Maßnahmenprämie um 5%;
c. Kürzung der Maßnahmenprämie um 10%;
d. Kürzung der Maßnahmenprämie um 25%;
e. Kürzung der Maßnahmenprämie um 50%.

- Mehrere Verstöße bei einer Maßnahme in einem Antragsjahr lösen eine Kumulation der Sanktionen nach einer spezifischen Regelung (Addition der Prozentsätze) aus;

  Das bedeutet z.B. wenn in einem Jahr bei einer Maßnahme bei zwei Förderungsverpflichtungen ein Verstoß festgestellt wird und einer mit b (Kürzung um 5 %) und einer mit d (Kürzung um 25 %) beurteilt wird, so wird die Maßnahmenprämie um 30 % gekürzt.
- Tritt innerhalb des Verpflichtungszeitraumes ein mehrmaliger Verstoß bei ein und derselben Förderungsvoraussetzung derselben Maßnahme auf, so wird die Sanktion ab dem zweiten Verstoß um eine Stufe erhöht und beim dritten Mal um zwei Stufen erhöht etc. („Förderungsvoraussetzungskumulation“). Die Obergrenze der Sanktion ist jedoch mit 100% der Jahresprämie begrenzt;

  Das bedeutet z.B. wenn im Jahr 2015 bei einer Maßnahme bei einer Förderungsverpflichtung ein Verstoß festgestellt wird, der mit b (Kürzung um 5 %) bewertet wird und im Jahr 2017 bei der gleichen Maßnahme bei der gleichen Förderungsverpflichtung ein Verstoß festgestellt wird, der mit c (Kürzung um 10 %) bewertet wird, so wird die Maßnahmenprämie im Jahr 2017 um 25 % gekürzt (Erhöhung von c um eine Stufe auf d).
- Tritt innerhalb des Verpflichtungszeitraumes ein mehrmaliger Verstoß bei ein und derselben Förderungsverpflichtung derselben Maßnahme auf und ist die zweite Burteilung e so erhöht sich die Kürzung der Maßnahmenprämie auf 100 %.

  Das bedeutet z.B. wenn im Jahr 2015 bei einer Maßnahme bei einer Förderungsverpflichtung ein Verstoß festgestellt wird, der mit c (Kürzung um 10 %) bewertet wird und im Jahr 2017 bei der gleichen Maßnahme bei der gleichen Förderungsverpflichtung ein Verstoß festgestellt wird, der mit e (Kürzung um 50 %) bewertet wird, so wird die Maßnahmenprämie im Jahr 2017 um 100 % gekürzt.
- Tritt innerhalb des Verpflichtungszeitraumes ein mehrmaliger Verstoß bei einer Maßnahme (aber nicht bei derselben Förderungsvoraussetzung) auf, so wird die ausgesprochene Sanktion nicht erhöht;
- Die Kürzung auf Grund der Kumulation von Verstößen kann max. 100% der Maßnahmenprämie des betroffenen Jahres erreichen;
- Wird im Verpflichtungszeitraum zwei Mal eine 100%-Kürzung durch Kumulation oder schwerwiegendem Verstoß vergeben, erfolgen der Ausschluss aus der Maßnahme und die Rückforderung bis Verpflichtungsbeginn;

# Anhang E Erhaltung und naturverträglicher Umgang mit Landschaftselementen

Die Verpflichtung zur Erhaltung und zu einem naturverträglichen Umgang mit auf oder max. 5m neben landwirtschaftlich genutzten Flächen befindlichen, in der Verfügungsgewalt des Betriebes stehenden sowie im LSE-Layer zu erfassenden flächigen und punktförmigen Landschaftselementen umfasst:

1. Für flächige Landschaftselemente (Feldgehölze/Baum-/Gebüschgruppen, Hecken/Ufergehölze und Raine/Böschungen/Trockensteinmauern) gilt:
    - Verbot der Entfernung und Zerstörung von Landschaftselementen;
    - Erhaltung der Anzahl der flächigen Landschaftselemente, Verbot der Rodung von Gehölzpflanzen, Verbot der Verrohrung und Zuschüttung von Klein- und Kleinstgewässern und Gräben, kein Ausgraben von Wurzelstöcken bei Gehölzen, die auf Stock gesetzt werden können, kein Abbrennen von Böschungen und Gehölzbeständen (ausgenommen das Abbrennen von Räumhaufen abseits von Wurzelstöcken und innerhalb der gesetzlich erlaubten Regelungen), keine Geländekorrekturen im Bereich der Landschaftselemente (Aufschüttungen, Abgrabungen, Nivellierungen) und Verbot der Anwendung sonstiger aktiver Maßnahmen, die zu einer Verringerung des Flächenausmaßes der Landschaftselemente führen.
    - Die Größe, Lage und Struktur flächiger Landschaftselemente dürfen im Einvernehmen mit den für den Naturschutz zuständigen Stellen des Landes verändert werden. Das Einvernehmen ist vom Förderungswerber vor der Durchführung der landschaftsverändernden Maßnahme schriftlich einzuholen und am Betrieb aufzubewahren. Von der Einvernehmensverpflichtung ausgenommen sind ordnungsgemäße Pflegemaßnahmen (z.B. Zurückschneiden, auf Stock setzen) sofern die bewachsene Fläche nicht verändert wird.
    - Verbot des Einsatzes von Dünge- und Pflanzenschutzmitteln;
    - Die Querung von Hecken durch Wirtschaftswege ist zulässig.

2. Für punktförmige Landschaftselemente (Bäume/Büsche inkl. Streuobstwiesen und Baumreihen) gilt:
    - Verpflichtung zur Erhaltung der Anzahl der punktförmigen Landschaftselemente, mit einem Kronendurchmesser von mindestens 2 m, sowie Erhaltung des Charakters von Streuobstwiesen.
    - Punktförmige Landschaftselemente dürfen entfernt oder auf Stock gesetzt werden, jedoch muss eine Ersatzpflanzung eines punktförmigen Landschaftselements auf oder innerhalb 5 m neben dem betroffenen Feldstück erfolgen, beziehungsweise das auf Stock gesetzte Element wieder austreiben. Die Ersatzpflanzung darf einen Kronendurchmesser unter 2 m haben. Eine Reduktion der punktförmigen Landschaftselemente ist über den gesamten Verpflichtungszeitraum ohne Ersatzpflanzung in geringem Umfang (1 Element pro angefangenen 10 Elementen) erlaubt (das bedeutet bis 10 Bäumen darf einer entfernt werden, bei 11-20 2 usw.).
    - Wenn mindestens 10 punktförmige LSE vorhanden sind, gilt Folgendes: Bei einer Entfernung von über 50% der punktförmigen Landschaftselemente trotz Ersatzpflanzung ist vorab das Einvernehmen mit der zuständigen Naturschutzbehörde herzustellen und es sind gegebenenfalls notwendige Festlegungen für Ersatzmaßnahmen zu treffen. Das Einvernehmen ist vom Förderungswerber vor der Durchführung von Maßnahmen schriftlich einzuholen und am Betrieb aufzubewahren.
    - Anzahl oder Lage punktförmiger Landschaftselemente dürfen im Einvernehmen mit den für den Naturschutz zuständigen Stellen des Landes verändert werden. Das Einvernehmen ist vom Förderungswerber vor der Durchführung der Maßnahme schriftlich einzuholen und am Betrieb aufzubewahren. Im Rahmen so einer Bestätigung kann auch Art und Größe des Landschaftselementes verändert werden.

# Anhang J Schlagbezogene Düngeplanung und Aufzeichnungen in der Maßnahme „Vorbeugender Grundwasserschutz“ (16)

Es sind folgende – oder inhaltlich vergleichbare - Aufzeichnungen zu führen – die schlagbezogene Düngung darf die Werte gemäß Düngervorgaben des Anhang I nicht überschreiten:

Grundwasserschutz Acker (nur Ackerflächen in der Gebietskulisse der Bundesländer Bgld., Ktn., NÖ, OÖ, Wien und Stmk. gemäß Anhang H - Gebiet Acker):

a. Schlagbezogene Düngeplanung gemäß Kapitel 2 des Anhangs J bis 28.02. des jeweiligen Verpflichtungsjahres
b. laufende Dokumentation der Düngung gemäß Kapitel 3 des Anhangs J
c. Nährstoffbilanzierung gemäß Kapitel 1 und schlagbezogene Düngebilanzierung gemäß Kapitel 4 des Anhangs J bis zum 31.12. des jeweiligen Verpflichtungsjahres

Grundwasserschutz Grünland (nur Grünlandflächen in der Gebietskulisse Sbg. gemäß Anhang H - Gebiet Grünland)

a. laufende Dokumentation der Düngung gemäß Kapitel 3 des Anhangs J
b. Nährstoffbilanzierung gemäß Kapitel 1 des Anhang J bis zum 31.12. des jeweiligen Verpflichtungsjahres

# Kapitel 1: Nährstoffbilanzierung

**Die Nährstoffbilanzierung ist bis zum 31.12. des jeweiligen Verpflichtungsjahres durchzuführen. Die Aufzeichnungsverpflichtungen gemäß AP Nitrat sind als gleichinhaltlich anzusehen.**

## Ermittlungsschritt 1: Landwirtschaftliche Nutzfläche (LN)

| | **Gesamte LN laut MFA-Flächennutzung:** | **ha** |
|---|---|---|
| | Summe aus Acker-, Grünland-, Wein-, Obst-, Hopfenflächen und Flächen im geschützten Anbau) – ohne Almfutterflächen | |
| + | Andere gedüngte Flächen, die nicht ÖPUL-LN sind (zB. Christbaumkulturen). | |
| = | **Summe LN** | |

Anmerkung: Almfutterflächen werden in der vorliegenden Berechnung nicht berücksichtigt. Wenn sich Tiere auf Almen/Gemeinschaftsweiden befinden, dann ist der dort angefallene Dünger aliquot der Alm zuzurechnen und für die Düngung auf den Heimgutflächen nicht relevant (gilt somit als Düngerabgabe).

Hinweis: **Bewilligungspflichtig** gem. Wasserrechtsgesetz ist das Ausbringen von Handelsdünger, Klärschlamm, Kompost oder anderen zur Düngung ausgebrachten Abfällen, ausgenommen auf Gartenbauflächen, soweit die Düngergabe auf landwirtschaftlichen Nutzflächen ohne Gründeckung 175 kg Stickstoff je Hektar und Jahr, auf landwirtschaftlichen Nutzflächen mit Gründeckung einschließlich Dauergrünland oder mit stickstoffzehrenden Fruchtfolgen 210 kg Stickstoff je Hektar und Jahr übersteigt. Dabei ist jene Menge an Stickstoff in feldfallender Wirkung anzurechnen, die gemäß AP Nitrat in zulässiger Weise durch Wirtschaftsdünger ausgebracht wird.

1) Ohne Einbeziehung Almfutterflächen
2) Im Falle einer niedrigeren Ertragserwartung sind die Werte entsprechend dem tatsächlichen Entzug anzupassen. Der Nährstoffbedarf wird unter anderem von der Höhe des erzielten Ertrages beeinflusst, der seinerseits wesentlich von den Standorteigenschaften abhängt. Die Ertragslage ist im mehrjährigen Durchschnitt relativ konstant und wird bei der Erstellung des Düngeplanes berücksichtigt. Zur Einstufung der Ertragslage eines Standortes können die Richtlinien für die sachgerechte Düngung herangezogen werden, wobei sich die Angaben auf einen mehrjährigen Durchschnitt beziehen.

## a. Berechnung des Stickstoffanfalls aus der Tierhaltung

### Ermittlungsschritt 10: Bewertung des N-Gehalts im Wirtschaftsdünger pro m³

Beim gemischten Anfall von Wirtschaftsdüngern (zB Rindergülle und Rinderjauche oder Rindergülle und Schweinegülle werden in einer Grube gesammelt) ist die gesamte Wirtschaftsdüngerart jener Kategorie zuzuordnen, die den überwiegenden N-Anfall bedingt.

Im ersten Jahr können, falls die Ausbringungsmengen nicht bekannt sind, folgende Gehaltszahlen gemäß Tabelle 4 im Wirtschaftsdünger zur Planung verwendet werden:

Tabelle 4: Orientierungswerte für Nährstoffgehalte bei Wirtschaftsdüngern

## Orientierungswerte für Nährstoff-Gehalte von in der Praxis vorkommenden Wirtschaftsdüngern in m³

Anmerkung: Diese Werte entsprechen dem N-Anfall am Lager. Die Zahlen dieser Tabelle stellen Mittelwerte dar, die stark schwanken können. Die vorrangige Möglichkeit stellt die betriebsspezifische Ermittlung des N-Gehalts dar (Berechnungsvorgang: N-Anfall aus der Tierhaltung je nach Wirtschaftsdüngersystem durch die anfallende Wirtschaftsdüngermenge dividiert = Nährstoffgehalt pro m³). Liegt ein entsprechendes Untersuchungsergebnis einer repräsentativen Probe vor, ist dieses den Tabellenwerten vorzuziehen.

# Anhang M Kombinationstabellen der Maßnahme „Naturschutz“ (19)

(1)

In der Naturschutz-Datenbank sind alle Negativ-Kombinationen sowie Pflichtkombinationen berücksichtigt. Werden Auflagen, die auf Grund der Prämienkalkulation (z.B. Doppelförderung) oder aus Datenbanktechnischen Gründen nicht miteinander kombiniert werden können, miteinander ausgewählt, erscheint automatisch eine Fehlermeldung.

**Codierung:**

Der Auflagen-Code ist immer vierstellig und setzt sich aus zwei Buchstaben sowie zwei Zahlen zusammen.

Der erste Buchstabe bezeichnet das Kapitel, z.B. G für Mähwiesen und -weiden oder A für Acker. Der zweite Buchstabe des Codes bezeichnet den Abschnitt, in dem die Auflage zu finden ist, z.B. GC wobei das C für den Abschnitt „Verzicht auf Erneuerung der Entwässerungsanlagen“ steht.

Folgende allgemeinen Regeln sind bei der Kombination von Auflagen zu beachten:

1. Die Auflagen der Kapitel S (Ackerstilllegung), A (Bewirtschafteter Acker), B (Begrünte Ackerfläche mit Wiesennutzung), G (Mähwiesen und -weiden), W (Weiden) und O (gehäckselte Obstwiesen) sind nicht untereinander kombinierbar.

2. Auflagen aus den Kapiteln L (Landschaftselemente) und N (Nicht prämienrelevante Auflagen) sind mit den meisten Auflagen aus anderen Kapiteln kombinierbar.

| E | nein | nein | nein | nein | nein | nein | nein | nein | nein | |

3. Auflagen innerhalb eines Kapitels mit unterschiedlichem Buchstabencode sind miteinander kombinierbar (z.B. GE mit GI). Auflagen im selben Abschnitt (= gleicher Buchstabencode) sind nicht miteinander kombinierbar (z.B. GE01 nicht mit GE02; mit Ausnahmen, s. Handbuch ÖPUL Naturschutzmaßnahmen 2015+).

# Anhang N: Naturschutzfachlich wertvolle Pflegeflächen (LP) (1)

Bei naturschutzfachlich wertvollen Pflegeflächen (LP-Flächen) handelt es sich um landwirtschaftliche Flächen, die auf Grund natürlicher Gegebenheiten, wie zum Beispiel Nässe oder Magerkeit, oder auf Grund länger ausgebliebener Nutzung nur zu einem geringen Anteil mit Futterpflanzen bestanden sind. Eine landwirtschaftliche Nutzung der vorhandenen Futterpflanzen ist aber erwünscht und widerspricht unter bestimmten Auflagen nicht den naturschutzfachlichen Zielsetzungen.

LP-Flächen müssen entweder in Folge aufgezählte Lebensraumtypen sein oder Habitate für Tierarten gemäß Anhang I VS-RL und Zugvögel gem. Art. 4 Abs. 2 der VS-RL, sowie Arten des Anhang II und IV der FFH-RL, die der Flächentypbeschreibung entsprechen, darstellen. Um förderfähig sein zu können müssen LP-Flächen von den Naturschutzabteilungen der Länder vorausgewählt und dann über Antrag an die Zahlstelle AMA in das Referenzsystem als eigene Flächenkategorie aufgenommen werden.

Im Fall von LP-Flächen gilt, dass maximal eine Nutzung pro Jahr stattfinden darf, aber mindestens ein Jahr ohne Nutzung im Verpflichtungszeitraum gegeben sein muss und keine Pestizide eingesetzt werden dürfen. Wenn Flächen gemäht werden, muss das Mähgut auch abtransportiert werden.

Wenn Landwirtschaftliche Nutzflächen, nicht-landwirtschaftliche Nutzflächen (z.B. Ödland, Wald) und LP-Flächen direkt aneinander grenzen, müssen die Flächenabgrenzungen optisch für die Bewirtschaftung und die Kontrolle klar ersichtlich sein, z.B. durch Zäune, Pflöcke oder natürliche Elemente wie Bäume.

LP Flächen können entweder der Kategorie „Feuchtlebensräume“ oder der Kategorie „Trockene oder karge Lebensräume auf mageren Standorten“ zugeordnet werden.

Zum Typ „Feuchtlebensräume“ zählen beispielsweise Uferwiesen (oft Pfeifengraswiesen), die stark von einem hohen Grundwasserstand und einer sehr extensiven Nutzung durch Mahd abhängig sind. Auch Übergangsflächen von Seerandwiesen zu Schilfgürtel können dem LP-Typ „Feuchtlebensräume“ zugeordnet werden. Ihr naturschutzfachlicher Wert liegt vor allem in der Funktion als Rast-, Brut- und Äsungsflächen für eine Vielzahl seltener Vogelarten, wie zum Beispiel für Tüpfelsumpfhuhn, Stelzenläufer oder Säbelschnäbler. Derartige Flächen können nur durch Mahd oder Beweidung längerfristig offen gehalten und damit in ihren Funktionen bewahrt werden.

LP-Flächen auf Feuchtlebensräumen:

- 1530 Pannonische Salzsteppen und Salzwiesen
- 6410 Pfeifengraswiesen
- 6440 Brenndolden Auenwiesen
- 7210 Kalkreiche Sümpfe (Schneidbinsenried)
- 7230 Kalkreiche Niedermoore
- Beispiele für Tierarten: Tüpfelsumpfhuhn (Porzana porzana); Kampfläufer (Philomachus pugnax), Säbelschnäbler (Recurvirostra avosetta) oder Dunkler Wiesenknopf-Ameisenbläuling (Maculinea nausithous)

Die meisten der in Frage kommenden Flächen für „trockene oder karge Lebensräume auf mageren Standorten“ sind ehemalige Wiesen und Weiden, die aufgrund ihrer geringen Ertragsfähigkeit derzeit nicht genutzt werden oder die von der Nutzungsaufgabe bedroht sind. Dementsprechend handelt es sich um trockenes bis sehr trockenes bzw. wenig ertragsfähiges Grünland. Eine jährliche Nutzung wäre in manchen Fällen aus landwirtschaftlicher Sicht möglich, ist aber aus naturschutzfachlicher Sicht nicht sinnvoll. Oft handelt es sich um besonders bunt blühende „Schmetterlingswiesen“. Weitere Flächen, die diesem LP-Typ zugeordnet werden können, sind stark felsige Standorte und somit landwirtschaftliche Grenzertragsflächen, die eine jährliche Nutzung nicht vertragen, da die Vegetation auf den extrem trockenen Hängen länger zur Regeneration braucht. Durch die Aufnahme dieser Flächen in das ÖPUL sollen die FFH-Lebensraumtypen in einem guten Zustand erhalten werden oder wieder in guten Zustand gebracht werden. Eine Sukzession zu naturschutzfachlich weniger wertvollen Stadien soll verhindert werden. Die Flächen wurden traditionell landwirtschaftlich genutzt. Vor allem in Jahren, in denen Futterknappheit herrschte, stellten diese ertragsschwachen Bereiche eine wichtige Erweiterung der Weidefläche dar. In diesem Sinn stellen sie auch heute noch in Verbindung mit umliegenden Weideflächen eine Möglichkeit dar, in trockenen Jahren die Versorgung der Herde ohne Überweidung einzelner Bereiche zu gewährleisten.

LP-Flächen auf trockenen oder kargen Lebensräumen:

- 2340 Pannonische Binnendünen
- 5130 Formation von Juniperus communis auf Kalkheiden und -rasen
- 6110 Lückige basiphile oder Kalk-Pionierrasen
- 6170 Alpine und subalpine Kalkrasen
- 6210 Naturnahe Kalk-Trockenrasen und deren Verbuschungsstadien
- 6230 Artenreiche montane Borstgrasrasen (und submontan auf dem europäischen Festland) auf Silikatböden
- 6240 Subpannonische Steppen-Trockenrasen
- 6250 Pannonische Steppen-Trockenrasen auf Löss
- 6260 Pannonische Steppen auf Sand
- Beispiele für Tierarten: Kurzflügelige Schönschrecke (Paracaloptenus caloptenoides) oder große Sägeschrecke (Saga pedo); die Große Sägeschrecke gilt als das größte und seltenste Insekt Europas und ist vom Aussterben bedroht. Es besiedelt trockene, warme und strukturreiche Steppenheiden, (Fels-) Trockenrasen und hohe Gebüschlandschaften. Besonders zur Ei- und Larvenentwicklung benötigt sie offene und sehr sonnige Standorte.

Für LP Flächen ist eine vielfältige und verstreute Ausstattung mit kleinen oder größeren „Strukturelementen“ oft sehr typisch. Aus diesem Grund werden bei LP Flächen diese Elemente nicht herausdigitalisiert und sind auch nicht mit der UBB-Auflage zur Abgeltung von Landschaftselementen kombinierbar, sondern es wird eine eigenständige Pflegeprämie gemäß dem Anteil Offenland/Strukturelemente berechnet. Die verpflichtende Erhaltung oder naturschutzfachlich erforderliche Beseitigung von Strukturelementen ist demnach in der Projektbestätigung festzulegen. Die in der Projektbestätigung festgelegten Pflegemaßnahmen beziehen sich daher sowohl auf die offene Fläche als auch auf die Strukturelemente.

Die Feststellung des Anteils an Offenland erfolgt durch die Naturschutzabteilung der Länder im Rahmen der Kartierung aus Gründen der Prämienberechnung. Es werden dabei folgende Einstufungen verwendet:

| | | |
|---|---|---|
| > 40-60% | Offenlandbereiche (Faktor 0,5) | [für Strukturelemente dann 0,5] |
| > 60-80% | Offenlandbereiche (Faktor 0,7) | [für Strukturelemente dann 0,3] |
| > 80-100% | Offenlandbereiche (Faktor 0,9) | [für Strukturelemente dann 0,1] |

Für die Prämienkalkulation werden ausschließlich die bereits für die Naturschutzmaßnahme kalkulierten Auflagen herangezogen und entsprechend adaptiert. Dies bedeutet, dass bei einmaliger Mahd in 5 Jahren ein Fünftel der Prämie für eine jährlich einmal gemähte Fläche herangezogen wird. Aus diesem Grund sind keine Neukalkulationen erforderlich.

Beispiel für Berechnung der Prämien:

*Beispiel 1:*

Eine 2,5 ha große LP-Fläche besteht aus 60-80 % offene Wiesenflächen, die restlichen Flächen sind mit Strukturelementen wie Sträuchern, Bäumen oder Felsen bestanden.
Es werden folgende Auflagen vergeben:

- PA03: 262 €/ha/Jahr (Mahd min. 2 x schwer bewirtschaftbar)
- PA08: 105 € ha/Jahr (Entfernung der Fläche vom Heimbetrieb größer 10 km)
- PA18: 75 €/ha/Jahr (Pflegeauflagen für die vorhandenen Strukturelemente)
- LD01: 39 €/ha (Teilnahme an einem Monitoringprogramm)

Die Prämien für die Offenlandbereiche und die Strukturelementbereiche werden gemäß ihrem Anteil berechnet und aufsummiert. Dabei soll vom Mittelwert des Offenland-Anteils ausgegangen werden. D.h. wenn eine Fläche 60-80 % Offenlandanteil aufweist, erfolgen die Gewichtung der Offenland-Prämien mit 0,7 und die für Landschaftselemente mit 0,3, das Monitoring wirkt auf der ganzen Fläche.
Daraus ergibt sich im vorliegenden Beispiel folgende Berechnung: [(262+105)*0,7]+(75*0,3) = 256,9+22,5 = 259,4 €/ha/Jahr

Für die Fläche ergibt sich somit eine EP-Prämie von 259,4 €/ha/Jahr
Hinzu kommt aus dem Titel Monitoring eine Prämie von 39 €/ha.

*Beispiel 2:*

Eine 9,8 ha große LP-Fläche besteht aus 40-60 % offene Wiesenflächen, die restlichen Flächen sind mit Strukturelementen wie Sträuchern, Bäumen oder Felsen bestanden.
Es werden folgende Auflagen vergeben:

- PA05: 123 €/ha/Jahr (Mahd min. 1 x schwer bewirtschaftbar)
- PA07: 53 €/ha/Jahr (Weide min. 1 x)
- PA19: 128 €/ha/Jahr (Pflegeauflagen für die vorhandenen Strukturelemente)

Die Prämien für die Offenlandbereiche und die Strukturelementbereiche werden gemäß ihrem Anteil berechnet und aufsummiert. Dabei soll vom Mittelwert des Offenland-Anteils ausgegangen werden. D.h. wenn eine Fläche 40-60 % Offenlandanteil aufweist, erfolgen die Gewichtung der Offenland-Prämien mit 0,5 und die für Landschaftselemente mit 0,5, das Monitoring wirkt auf der ganzen Fläche.
Daraus ergibt sich im vorliegenden Beispiel folgende Berechnung: (123+53)*0,5+(128*0,5) = 88+64 = 152 €/ha/Jahr. Für die Fläche ergibt sich somit eine Prämie von 152 €/ha/Jahr.
